| Automatic alerts for the launch of new countries                                                                                                                                                          |
| Add geographic comparison functionality – enable comparison based on proximity (e.g. nearest locations, within 10 km, 50 km, etc.), including the ability to generate further analysis from these outputs |
| Introduce time-based comparison – allow users to compare data across different time periods to track developments, trends, and changes over time                                                          |
| Enhance static comparison (Click & Compare) – further develop the existing feature to provide more comprehensive and flexible comparison outputs                                                          |
|                                                                                                                                                                                                           |
|                                                                                                                                                                                                           |
|                                                                                                                                                                                                           |
|                                                                                                                                                                                                           |
|                                                                                                                                                                                                           |
